

Content Authoring and Storyboarding Guide

Swasthya Katha — Visual Lesson Production Standard

Version: 1.0

Status: Draft for content-team approval

Date: 24 August 2026

1. Purpose

This guide helps authors, clinicians, designers, translators, narrators, and developers create lessons that communicate one important idea clearly and respectfully.

2. Lesson formula

Question or concern
-> Simple explanation
-> Visual demonstration
-> Misconception correction
-> Practical action
-> Help pathway

3. Learning objective

Write one observable objective:

“After this lesson, the reader can explain _____ and identify _____.”

Avoid objectives such as “understand sexual health” because they cannot be tested.

4. Lesson template

Lesson ID:
Title:
Audience:
Locale:
Learning objective:
One-sentence key message:
Prior knowledge assumed:
Medical claims:
Plain-language script:
Visual concept:
Important targets:
Narration script:
Comprehension prompt:
Action step:
Referral message:

Accessibility description:
Sources:
Clinical reviewer:
Language reviewer:
Review date:

5. Storyboard structure

Scene 1 — Establish the question

Show a familiar situation or question without blame.

Scene 2 — Explain one concept

Use one short sentence and one visual relationship.

Scene 3 — Guide attention

Tell the reader what to notice.

Scene 4 — Correct a misconception

Show the common misunderstanding and a respectful correction.

Scene 5 — Give an action

State the safe next step clearly.

Scene 6 — Connect to support

Show where a qualified health worker or service can help.

6. Visual writing rules

- One dominant visual idea.
- Stable visual metaphor.
- Simple labels.
- Progressive reveal.
- Target IDs for every explained region.
- Static and text fallback.
- No decorative movement that competes with the lesson.
- No imagery that suggests appearance alone proves a diagnosis.

7. Narration writing rules

Write for listening:

- Short clauses.
- Natural pauses.
- Familiar language.
- Say what is visible.
- Repeat the action.
- Avoid complex lists.
- Use calm, non-judgmental delivery.

Suggested pattern:

```
"Look at this picture.  
This part shows ____.  
Notice ____.  
This means ____.  
A helpful next step is ____."
```

8. Highlight specification

Every narration segment may map to:

- Transcript token IDs.
- Text block IDs.
- Visual target IDs.
- Animation action.

Example:

```
{  
  "id": "event-03",  
  "startMs": 4200,  
  "endMs": 6800,  
  "blockId": "testing-explanation",  
  "textTokenIds": ["testing", "reliable"],  
  "sceneTargetIds": ["testing-clinic"],  
  "action": "pulse"  
}
```

9. Quiz authoring

Good questions:

- Test one concept.
- Use plain language.

- Have one clearly supported answer.
- Explain the answer.
- Allow retry.
- Do not shame the user.
- Do not ask users to diagnose themselves.

10. Action cards

Every action card should answer:

- What can I do?
- Why does it help?
- What should I expect?
- Where can I get support?
- What should I avoid?

The final wording needs clinical and local-service review.

11. Visual scene contract

```
{
  "sceneId": "clinic-journey",
  "targets": [
    {
      "id": "talk-to-worker",
      "label": "Talk with a health worker",
      "description": "A trained health worker can answer questions and guide you.",
      "fallbackText": "Ask a qualified health worker for guidance."
    }
  ]
}
```

12. Prototype lessons

Lesson 1 — What is an STI?

Objective: Reader can describe the basic concept without stigma.

Visual: Abstract network of people and pathways.

Action: Seek reliable information and professional guidance for personal concerns.

Lesson 2 — Some infections have no visible signs

Objective: Reader understands that appearance alone is not a reliable way to know.

Visual: Friendly figures with a hidden information layer.

Action: Testing or professional advice may be needed.

Lesson 3 — What happens during testing?

Objective: Reader can describe the basic clinic journey.

Visual: Conversation, sample collection, results, and next steps.

Action: Ask a qualified service what testing involves.

All health wording must be clinically approved before publication.

13. Authoring review checklist

- ☐ One objective.
- ☐ One key message.
- ☐ Plain-language version.
- ☐ Source claim register.
- ☐ Visual storyboard.
- ☐ Target IDs.
- ☐ Accessibility description.
- ☐ Narration script.
- ☐ Transcript.
- ☐ Comprehension prompt.
- ☐ Action step.
- ☐ Referral path.
- ☐ Clinical review.
- ☐ Translation review.
- ☐ Accessibility review.
